

Distributed Antenna System (DAS)

In-Building Distributed Antenna System

Outdoor Distributed Antenna System

A Distributed Antenna System (DAS) involves the use of several antennas as opposed to one antenna to provide wireless coverage to the same area but with reduced total power and additional reliability. A DAS is used to provide wireless coverage to hotels, subways, airports, hospitals, businesses, and roadway tunnels etc. The wireless services typically provided by a DAS include PCS, cellular, Wi-Fi, police, fire, and emergency services.
